

BRIGHT LIGHTS AND LASERS? THE TRUTH BEHIND TEETH WHITENING

The truth behind the smile from a dental group who don't pull the wool over your eyes.

Because the whitening treatment itself is very simple and holds no secrets.

Lazer beams and LED lights? Completely unnecessary and they achieve nothing, there is no requirement to heat or light the teeth first - it is a waste of time.

And for the time itself, 20 minutes is all it takes for the whitening agents to do their job: any additional time spent on the treatment is a waste of time. But, it does make the cost look more acceptable.

We give it to you straight, no secrets and no fairy stories.

The truth, no tooth fairies.
